

# Anastrozole

## CAS

120511-73-1

## Status

Commercial

[Inquiry](#)

Anastrozole is an aromatase inhibitor that prevents the final step of androgen synthesis, which reduces estrogen levels. Tumors that grow through androgens are inhibited in growth as a result. Therefore, Anastrozole is used in hormone-dependent tumors in women after menopause. It has no androgenic, estrogenic or gestagenic properties.

## Description

### Formula

C<sub>17</sub>H<sub>19</sub>N<sub>5</sub>

### Molecular weight

293.37 g/mol

### Molecular size

small

### Controlled Substance

no

### Precursor

no

### Indications

Endocrine therapy
