

Benazepril hydrochloride

Benazepril hydrochloride is a prodrug whose metabolite inhibits the Angiotensin converting enzyme (ACE inhibitor). The decrease in the product of ACE (Angiotensin II) leads to a lower tone of the blood vessels, which is why blood pressure decreases. This makes arterial hypertension and heart failure treatable.

Description	
Formula	C ₂₄ H ₂₈ N ₂ O ₅ • HCI
Molecular weight	460.95 g/mol
Molecular size	small
Controlled Substance	no
Precursor	no
Indications	Agents acting on the renin-angiotensin system
