Inquiry

Bosentan is an endothelin receptor antagonist, displacing endothelin-1. This removes the effect of endothelin-1. As a result, blood vessels dilate and (pulmonary) blood pressure decreases. Bosentan is an orphan drug used to treat rare pulmonary arterial hypertension (pulmonary blood pressure), it has recently been used quite successfully for scleroderma (autoimmune connective tissue disease).

Description

Formula	C ₂₇ H ₂₉ N ₅ O ₆ S
Molecular weight	551.61 g/mol
Molecular size	small
Controlled Substance	no
Precursor	no
Indications	Antihypertensives
