

Tenofovir disoproxil fumarate

Tenofovir disoproxil fumarate is a nucleotide analogue that belongs to the nucleotide reverse transcriptase inhibitors (NtRTI). It is incorporated by viruses instead of deoxyadenosine triphosphate (dATP) (competitive inhibition), but the chemical structure leads to chain termination in any case. It is used in the treatment of HIV-1 infections and hepatitis B.

Description	
Formula	C ₁₉ H ₃₀ N ₅ O ₁₀ P • C ₄ H ₄ O ₄
Molecular weight	635.52 g/mol
Molecular size	small
Controlled Substance	no
Precursor	no
Indications	Antivirals for systemic use
