

Benazepril hydrochloride

CAS

86541-74-4

Status

Commercial

Inquiry

Benazepril hydrochloride is a prodrug whose metabolite inhibits the Angiotensin converting enzyme (ACE inhibitor). The decrease in the product of ACE (Angiotensin II) leads to a lower tone of the blood vessels, which is why blood pressure decreases. This makes arterial hypertension and heart failure treatable.

Description

Formula $C_{24}H_{28}N_2O_5 \cdot HCl$

Molecular weight 460.95 g/mol

Molecular size small

Controlled Substance no

Precursor no

Indications Agents acting on the renin-angiotensin system
