

# Brimonidine tartrate

## CAS

70359-46-5

## Status

Commercial

[Inquiry](#)

Brimonidine tartrate is an imidazolin derivative that is a selective agonist of  $\alpha_2$ -adrenoceptors. As it binds less to  $\alpha_1$ -adrenoceptor, the side effects it mediates decrease. It acts sympathomimetic. Due to the lower chamber water formation and the increased uveoscleral outflow, the intraocular pressure decreases in the open-angle glaucoma (reserve drug). It can also be used to treat facial erythema, as it leads to the constriction of blood vessels in the facial area.

## Description

**Formula**  $C_{11}H_{10}BrN_5O_2 \cdot C_4H_6O_4$

**Molecular weight** 442.22 g/mol

**Molecular size** small

**Controlled Substance** no

**Precursor** no

**Indications** Ophthalmological drugs
