Inquiry

Dexmedetomidine hydrochloride is a stereoisomer of Medetomidine (sedative) and acts via the α 2-adrenoreceptors and reduces the norepinephrine release. Further it has a sympatholytic effect and is therefore used as a sedative. Due to the lower habituation rate than with benzodiazepines and opioids, it is longer applicable.

Description

Formula $C_{13}H_{17}ClN_2$

Molecular weight 236.74 g/mol

Molecular size small

Controlled Substance no

Precursor no

Indications Anesthetics
