

Eletriptan

CAS

143322-58-1

Status

Development

Eletriptan is a triptan that selectively binds at 5-HT_{1B&1D} (Serotonin receptors) as an agonist. This triggers the narrowing of cerebral blood vessels while reducing several inflammatory mediators such as serotonin and substance P. This explains the migratory reducing effect. Eletriptan is therefore approved for headaches and migraines with and without aura.

Description

Formula C₂₂H₂₆N₂O₂S

Molecular weight 382.50 g/mol

Molecular size small

Controlled Substance no

Precursor no

Indications Analgesics
