

# Isocarboxazide

CAS

59-63-2

[Inquiry](#)

Isocarboxazide belongs to the group of monoaminooxidase inhibitors (MAO inhibitors). The active substance blocks an enzyme that breaks down neurotransmitters (serotonin, dopamine and noradrenaline). It is used for the treatment of depression, panic disorders and dementia-like diseases.

## Description

<b>Formula</b>	C <sub>12</sub> H <sub>13</sub> N <sub>3</sub> O <sub>2</sub>
<b>Molecular weight</b>	231.25 g/mol
<b>Molecular size</b>	small
<b>Controlled Substance</b>	no
<b>Precursor</b>	no
<b>Indications</b>	Psychoanaleptics
