

# Tamsulosin hydrochloride

## CAS

106463-17-6

## Status

Commercial

[Inquiry](#)

Tamsulosin hydrochloride is a benzenesulfonamide derivative that acts as an  $\alpha$ -blocker. It binds to the  $\alpha$ 1-adrenoceptors and has a high selectivity for prostate receptors. Binding results in smooth muscle relaxation of the bladder neck, urethra, and prostate gland. The side effects are limited by the selectivity, it is therefore used against the symptoms of benign prostate enlargement (BPH).

## Description

**Formula**  $C_{20}H_{28}N_2O_5S \cdot HCl$

**Molecular weight** 444.97 g/mol

**Molecular size** small

**Controlled Substance** no

**Precursor** no

**Indications** Urologicals
