

Terlipressin

CAS

14636-12-5

Status

Commercial

Inquiry

Terlipressin belongs to the group of vasopressin derivatives. The active substance has vascular narrowing properties and induces gastrointestinal contraction. It is used for the treatment of acutely bleeding esophageal varices.

Description

Formula

$C_{52}H_{74}N_{16}O_{15}S_2$

Molecular weight

1,227.37 g/mol

Molecular size

small

Controlled Substance

no

Precursor

no

Indications

Pituitary and hypothalamic hormones and analogues
